Proposal to Include IEC Power Button Symbols in Unicode

Joe Loughry and Terence Eden

8th December 2013

Abstract

The international symbols P⏻ meaning 'power on' and P⏼ meaning 'stand-by' are not in Unicode. Clearly these would be useful to anyone writing technical or user manuals. Furthermore, for electronically published documentation, it is crucial to have the symbols defined in Unicode because it makes them search-able in text. In this proposal we provide a TrueType font containing the glyphs as specified in three international standards together with all needed character properties.

1   Introduction

It has long been known. . . [1]
